COLLECTOR AND THE WEB BASED PRODUCT

COLLECTOR

- Central Trauma Registry
  - Available memory
  - Cluster server environment vs. virtual server environment
  - Share drive instead of an application drive
  - Windows 7
  - Unable to upload downloads from software based programs
  - Very backlogged in entering abstracts into Central Trauma Registry and providing feedback

COLLECTOR

- What are we doing about it?
- Actively looking at putting Collector on the application server where MT Tumor Registry
- Testing, updates and changes will still need to be made

- **I will look at those facilities that submitted abstracts and provide a letter with feedback about issues that I see (so you get some sort of feedback, since our feedback is used for PI etc) since I don't know when we will be up and running**

WEB-BASED COLLECTOR FOR PAPER ABSTRACT USERS

- **It all came to a halt early last summer**
  - State web site
  - Staff changes with MT IT and falls off radar screens
  - Better communication, DI, MT IT and MT EMSTS on same page and all are getting the same information
  - Start training ICD9 education (Spring 2014)? with super users and then roll out with webex coding to all (will update at RTAC, STCC and listserve)
  - Will continue to do testing of product to see if server will support and hopefully minimize glitches
  - Need to have a product for education to make sense
  - Don't want to have education that will be forgotten and not used right away
  - Still awaiting report function
